paufil®
prefabricated formwork slabs for edges

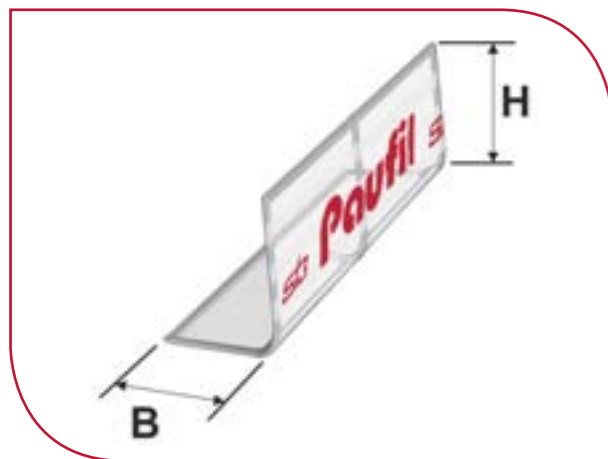

1. DEFINITION

Paufil® is a prefabricated formwork that can be hidden. It is made with a mesh of steel that is bent

at an angle of 90° and is lined with transparent plastic.

2. DIMENSIONS

B (cm)	H (cm)
12	18
10	20

- For other dimensions please consult about the possibility of manufacturing them.

3. POSITIONING

- The hidden **Paufil®** formwork is placed on the supporting wall.

- On top of **Paufil®** put a layer of mortar which provides a strong element for precast concrete. You can also place a layer of neoprene.

Depending on the circumstances, the **Paufil®** formwork can also be attached to the supporting wall by staples and nails.

- The **Paufil®** formwork should always be at a minimum distance of 2 cm from the inner edge of the enclosure, to prevent possible rust stains on the ceilings.

Depending on the height it may be necessary to use fasteners to prevent a possible opening or buckling of **Paufil®**.
